Sensational Low Prices on High Grade Stock

General Information and How to Order

LOCATION

Our nursery is located at Baroda, Michigan, Berrien County, 6 miles east of U. S. 12 and 6½ miles west of U. S. 31, on the Berrien Springs and Baroda road.

ORDERING

No order accepted for less than one dollar. Be sure to state how you want your order sent and give your post office, express office, or freight office address. Order early and write plainly.

ACKNOWLEDGMENT

Orders acknowledged same day received and shipped as per your instructions.

SHIPMENT

Begins about the first of March and lasts until May 15. We can ship your order any time you state in your letter, weather being favorable. We recommend parcel post as the most desirable method of shipment for small orders and express for larger orders. Raspberry, blackberry, and other heavy plants can be shipped safely by freight early in the season. However, all freight shipments go at customer's risk. On late shipments, we advise to ship by express or parcel post.

PARCEL POST

Strawberry plants can be sent by parcel post. Transportation charges are paid by the customer on receipt of stock. Through our many years' experience in shipping nursery stock we find this method most satisfactory to customer and shipper. You pay the charges C. O. D., thus you pay only your exact charges. If flat transportation charge was made, customers living 300 miles from us would have to share the charges for those living 2000 miles away. Parcels marked C. O. D. for delivery charges receive special attention of postal clerks and are automatically insured. If your parcel or any part of the contents is lost or damaged, you may notify us at once and we will make adjustment.

TERMS

We will book all orders when one-fourth cash accompanies the order. On One to Five-Dollar orders, cash before order is shipped. On larger orders cash before stock is shipped if convenient, if not, we will ship C. O. D. for balance.

REMITTANCE

Send Express or Post Office Money Order, Draft or Registered Letter; checks from responsible persons are also accepted. Please do not send stamps.

CLAIMS

We consider that you know what you want and fill your order accordingly, never substituting without permission. When ordering late in the season, state second choice. In case of error all claims must be made within 5 days after goods are received.

Why You Should Buy DUNHAM'S Plants

Our climate is ideal for growing plants and we have spared no expense in our soil improvement. Every field has been carefully studied and planned several years in advance, and all the modern methods known used to preserve the moisture for the plants during the dry season. Many carloads of fertilizer are used each season.

WE SAVE YOU MONEY BECAUSE WE SHIP DIRECT FROM OUR NURSERY FARM TO YOU!

We are mailing you our wholesale price list instead of our usual catalog. Also, spending less on advertising. We grow our own plants, pack and ship direct from packing house on the farm; thus, enabling us to sell these plants at this low price. Your order or inquiry will have our personal attention.

OUR GUARANTEE

We guarantee all our plants to be fully up to grade, of good quality, free from disease, and absolutely true to name; also to reach the customer in perfect condition.

Furthermore, we will, at our option, either replace free of charge or refund purchase price, on any stock that arrives in bad condition; PROVIDING CLAIM IS MADE WITHIN FIVE DAYS FROM ARRIVAL OF SHIPMENT, ACCOMPANIED BY A SIGNED STATEMENT FROM THE EXPRESS AGENT OR POSTMASTER AT DESTINATION, SHOWING EXTENT OF LOSS OR DAMAGE.

OUR PLANTS TRUE TO NAME

If any plants prove untrue to name they will, at our option, either be replaced free of charge, or purchase price will be refunded but in no case will we be responsible for a sum greater than the original purchase price paid. Beyond this our liability ceases. It is understood and agreed between the customer and ourselves that the purchaser's order and our acknowledgment of its receipt, shall constitute a mutual acceptance of the above terms and conditions.

BARODA, MICHIGAN**

Dunham's Quality Strawberries . . .

At The Right Price!

MASTODON

EVERBEARING STRAWBERRY

MASTODON EVERBEARING STRAWBERRY—

Since the introduction of the everbearing class, many varieties have been tried, improved and supplanted. According to reports gathered from all berry-growing sections of the country, Mastodon is the last word and outranks all predecessors. It is of immense size, an almost incredible cropper, of choice quality, and the strongest grower yet developed. More productive than most June bearers, its fall pickings are sufficient from but a few plants, and very profitable.

BLAKEMORE

BLAKEMORE—Extra early, ripening same time as Beaver, and four or five days before Premier. Introduced by U. S. Department of Agriculture. A cross between Premier and Missionary. Strong, vigorous grower and extra good plant maker. Berries are bright red, and resemble Premier, although they are somewhat larger and better color. Very firm, and a good shipper. Excellent canner. Will undoubtedly take the place of Missionary and Klondike in the South, and will do well in the North anywhere Premier has been grown.

RED GOLD

RED GOLD—This variety with that wild strawberry flavor was introduced by Gardner Nursery Company, Iowa. A new medium early variety that seems to have taken the country by storm during the past year or two.

A wonderful plant maker with a strong, deep-growing root system. This is claimed to withstand more droughts than any other strawberry grown. The foliage is dark green; leaves are large, furnishing complete protection to both flower and fruit.

The stems of the plant remain upright and in this way the fruit is kept clean. They are exceptionally large, measuring 10 to 15 inches long, or more than double the size of Senator Dunlap and carrying an average of three times as many berries to the stem.

The berries are very large with a record of an individual berry that measured $8\frac{1}{2}$ inches around. The berries are of distinct shapes, holding their size to the end of the long 30-day fruiting season. They are firm and meaty with flesh tender, filled with sweetness and a real old-fashioned strawberry flavor. The color is bright glossy red making them exceptionally attractive when marketed.

PREMIER

PREMIER—Too well known to require a description. A standard of excellence with all growers, and the earliest worth while strawberry of the older varieties we know of. This feature alone makes it a great money maker, for it yields its fruit crop at a time when strawberries are in great demand and selling at fancy prices.

Premier is as nearly frost-proof as any strawberry can be. It is unusually healthy, being free from leaf spot and other disease. Its deep, heavy roots enable it to easily withstand dry weather, and mature a full crop of big berries when many varieties are a complete failure.

Our stock is from the original, heavy fruiting strain, bearing our true-to-name guarantee.

BEAVER

BEAVER—A wonderful new strawberry recently originated in Wisconsin. A cross between Dr. Burrill and Premier. It seems to have retained all the valuable fruiting features of Premier, and in addition has, like Dr. Burrill, that wonderful ability to produce a large number of new plants. For this reason, Beaver is far more certain than Premier to produce a good fruiting row under unfavorable weather or soil conditions. The berries are of a deep glossy red which extends over the entire berry to the heart of the fruit. Is very productive, hardy and frost resistant in both bud and blossom. The fruit is very firm and of such texture that it does not require picking more than twice a week. Beaver is one of the earliest varieties, and it extends over such a long period of time that it may also be classed among the late varieties. Begins ripening three or four days before Premier. Unsurpassed as a shipper, it will make a good fruiting row on any kind of soil. Leading growers are setting large acreage to Beaver, as its ability to stand up under extreme conditions, rich color, size and attractive appearance command the highest price.

COOPER

COOPER—The plant growth of Cooper is very vigorous, making a moderate number of large strong plants rather than tremendous numbers of smaller ones. Under favorable conditions, it will average even larger than Premier. It is very fine in quality and handsome in appearance. It is excellent for roadside or nearby markets, but unsuitable for shipping distances.

Cooper's main value, we believe, will be to growers who have a good local market and want a berry somewhat larger than Premier, otherwise we cannot see why it should replace Premier for a main crop berry of this season.

When planting Cooper avoid land that is wet. They are subject to decay.

Our plants are very strong and well rooted; well worth trying if you have a good local or nearby market.

We Specialize in Berries

All Plants Grown on New Ground
Plant an Acre or Two

DR. BURRILL

DR. BURRILL—If you are looking for a dependable, all-purpose strawberry, you will make no mistake in planting Dr. Burrill, for it stands among the very best in midseason varieties. It is a cross between the old "standby," Senator Dunlap, and Crescent, closely resembling Dunlap in appearance, but claimed to produce bigger, better berries, and more of them. Dr. Burrill is one of the cleanest, healthiest plants grown, never showing rust nor leaf spot, and so hardy and adaptable that it produces a good fruit crop anywhere, even in locations so unfavorable that many promising varieties fail. Valuable for commercial purposes or for home use.

BEAUTY

BEAUTY—This variety is well named. Introducers say that it may just as well have been named Delicious or Keep Well. Our one year's experience does not justify us in giving a definite opinion on the variety but judging from that one year Beauty will become better liked as it becomes better known. This is one of the most vigorous in the field of many varieties; one of the strongest plant growers we know of, growing as tall as 15 inches with extra large leaves. Fruit stalks, grow upright, holding berries off the ground.

Capable of producing and maturing large crops of fancy berries. The berries are large in size, dark red all the way through, very firm and remarkable keepers. Every grower should try and get the best for his particular needs. We recommend Beauty especially to those growers who have been using midseason varieties. It may be that Beauty will show up even better than what you have been using. Does not require mulching as it blooms late enough to escape all frosts. This berry is one of the best for commercial plantings as it will easily carry to distant markets. It is certainly worthy of a trial by any berry grower.

AROMA

AROMA—One of the best of all late varieties, is popular in the middle west and the middle southern states, and probably more acres of Aroma are grown there than any other late variety. It is grown because of its vigor, productiveness, and the beauty of the berries.

The berries are light red in color, every berry of almost perfect strawberry shape, and a bright green cap adds greatly to their beauty and selling price.

In addition they are excellent shipping berries being by far the most popular and most profitable late shipping berry in the South.

SENATOR DUNLAP

SENATOR DUNLAP—For many years Senator Dunlap probably was more widely known in the middle and northern states than any other variety but has been replaced by Premier. Senator Dunlap has always been a favorite with the beginner because, it will grow well and practically always bear a heavy crop of fruit. It will produce a heavier crop than most other varieties, being surpassed in this respect by Premier and a few other fancy sorts. Berries are dark red, top-shaped and medium in size. Senator Dunlap still finds favor with many of the growers.

HARVEST KING

HARVEST KING—Harvest King stands well in productiveness, quality and in all other respects. Due to the firmness and solidity of the berries, they hold up well after picking. This feature is a great advantage to growers who ship their fruit long distances.

It is very satisfactory in plant growth. The foliage is a healthy dark green. Makes a fine fruiting row. It succeeds on all soils, but we recommend a moist soil.

It blooms late. This is an ideal berry for one who lives in a locality where late spring frosts occur.

The berry is a deep red color, and has a delicious flavor. Requires less sugar than most varieties. The berry is large, but there is a tendency to decrease in size toward the end of the season. It is a good canning berry as it retains its original flavor and dark red appearance even after cooking.

This berry has gained much favor in this section in the past few years.

NEW WASHINGTON

NEW WASHINGTON—The Honey Sweet strawberry. Late. This berry is a leader in the world of new strawberry creations, oxheart red, good row maker. Heaviest yielder of the strawberry world, needs very little sugar in canning, crops over a long period. Is of tremendous size, a fine shipper, in fact, we look for this to be in the main crop varieties for the future.

Dunham's Strawberries

Grow in Any Soil!

Rush Your Order Today

GIBSON

If the number of times a plant has been introduced is any indication of its worth, Gibson certainly should be good because to our knowledge it has been grown as Pocomoke, Parson's Beauty, Sussex, and Great Scott.

Gibson is a very valuable variety. The plants make a vigorous growth and are very productive and bear through a long season. We have had drought affect them in picking some seasons very badly. The berries are medium in size, dark red in color; the quality is fine. The deep red color together with the fact that the caps or hulls part easily from the berries makes them very popular for canning. Gibson is not a shipping berry but for home garden or local market is very valuable in most sections.

PEARL

Unquestionably it is the latest, often ripening its fruit as late as the Fourth of July, and if it has any faults, we have failed to find them after growing Pearl for several years. The fruit is everything that could be asked for to make it an ideal market berry. It is displacing the Aroma in a good many sections, and that is a first-class recommendation as Aroma has been the main late berry for years.

It is large in size, dark red to the heart, firm quality with a tough outer skin that gives it unusual firmness and keeping qualities. Its prominent yellow seeds add the finishing touch to its attractiveness, and as it possesses a most delicate flavor and is a heavy and sure cropper, what more could be asked for to make it an ideal late berry? When Pearl is in its prime, other varieties are off the market, and as it has the field to itself, the prices paid for Pearl are quite naturally the highest.

Dunham's Selected Raspberries Will Bring You Big Profits

**Dunham's Raspberries Are Double Inspected
and Certified Free from Disease!**

Latham Red Raspberries NEW CHIEF (Minn. 223) (RED)

It is known for its hardiness and produces an abundance of high quality fruit which ripens about 10 days after Chief (Minnesota 223) and holds up well in size throughout its long fruiting season.

The texture of the fruit makes it a wonderful shipping variety and in production we believe it to be the heaviest fruiting variety ever introduced. It is perfectly hardy and a vigorous grower. It is truly a money-making variety as its large attractive fruit demands as much as a dollar per crate more than other varieties on our local market. The demand for Latham plants always exceeds the supply. Order early.

CUMBERLAND

(THE BUSINESS BLACKCAP)

This is the most popular blackcap at the present time, because of its great size, firmness, and productiveness. The fruit is the largest of the Raspberry family, and is of such handsome appearance that it is sure to bring the top prices on the market.

Cumberland has never been known to fail to produce a big crop every year. This variety is perfectly hardy and tremendously productive, the bushes are vigorous, upright and healthy. Berries are a glossy black in color, not equalled by any other variety in quality, flavor and appearance. It's good to eat and good to sell.

RASPBERRIES

**always sell at profitable prices
regardless of times. . . .**

The outstanding early red Raspberry. Chief was originated at the Minnesota State Fruit Breeding Farm and is a selection from 4000 seedlings of Latham; the product of 14 years of experiment and selection.

Here is a wonderful red Raspberry that is forging ahead as fast as did its illustrious ancestor, Latham, and it has just as important a place to fill for it is 10 days earlier than Latham, ripening at a time when red raspberries bring the most on the market.

It is as productive as the Latham. The berries are of good size and of excellent quality. The bushes are hardy and resistant to disease. We consider Chief the most outstanding raspberry that has been produced in years and believe these two, Chief and Latham, will make more money for fruit growers than any other two varieties that they can grow, combining as they do, a long fruiting season, extra heavy yield and fruit of such size, color, and quality as to command top prices at all times.

With our experience we have found this to be the best early berry which has taken the place of Early King. We urge you to get started early this season with at least a few Chief.

PLUM FARMER

Plum Farmer is very popular with many growers on account of its earliness, and ability to mature its customary big yield in a very short time, usually from 10 to 12 days. The plants are healthy, canes strong growers and produce plenty of bearing wood, which insures a heavy crop of fruit. The berries, which are produced in clusters are large, well colored and of first quality.

Plum Farmer will give satisfaction everywhere. Ripens about a week earlier than the Cumberland and can be worked in nicely with that variety.

New Logan . . .

The Most Dependable Black Raspberry Grown

NEW LOGAN—The most dependable Black Raspberry grown. Logan is not a new variety, as it has been grown several years in Ohio in one of the largest commercial berry sections. This variety through sheer merit, has replaced very nearly all of the standard kinds in Ohio; at present more than three-fourths of the plants are New Logan. The berry ripens one week earlier than Cumberland, giving the grower a chance to make some real money before the old standard variety, Cumberland comes into bearing. It is an extra heavy yielder, and the berries are as large or larger than Cumberland. It holds well through drought, and, in fact, the last picking has always proven fresh and free from seediness and a tendency to crumble as the first. Its most outstanding characteristic is its resistance to mosaic and other Raspberry diseases. It seems to outclass all other black Raspberry varieties in this respect. We have a fine lot of absolutely disease-free New Logan tips to offer early spring.

BLACKBERRIES

A Hardy, Easy to Grow, and Profitable Fruit

ALFRED (New Coreless Blackberry)

A week earlier than Eldorado, bears the second season after planting, perfectly hardy regardless of how cold weather. They are very sweet without any hard core. Undoubtedly they are the largest blackberry as well as the best ever grown. We feel we are giving our patrons a wonderful chance at prices at which we are offering this famous new blackberry.

ELDORADO—Every good quality possessed by other Blackberries is emphasized in Eldorado. It is absolutely free from orange rust. It is a very heavy bearer with great, jet black, juicy berries.

The plants are strong and vigorous enough to survive the severest northern winters, without mulching.

It is valuable for all purposes, both home and commercial, being so very firm that it can be sent a great distance and remain in good condition for 3 or 4 days.

GRAPES . . .

Every Home Should Raise Some

CACO

New widely advertised Red Grape. Bears enormous bunches of unusually large berries of a rich wine-red and amber color. Flavor of the finest, very rich and sweet. Ripens early in September. Stock of this variety is limited. Order early.

CONCORD

A large, purplish black Grape. Bunch is large, shouldered and compact. Berries are large, flesh is juicy, sweet and tender; excellent flavor. Vine a strong grower; very healthy, hardy and productive. The most reliable and profitable market variety.

CAMPBELL'S EARLY

A large dark blue Grape of high quality; large size and attractive appearance, and a good shipper. Ripens ten days to two weeks ahead of Concord.

DELAWARE

Red bunch, small, compact, the finest flavored grape grown. Ripens same time as Concord. A mighty fine grape.

NIAGARA

White. Occupies the same position amongst the white as Concord holds in the black, the leading white market grape. Bunch and berries large, yellowish white, a heavy yielder.

MOORE'S EARLY

A seedling of the Concord which it resembles. One of the best early black grapes grown. Bunches medium large, inclined to looseness. Berries very large and round. Quality good. Vine vigorous and hardy. Ripens about ten days ahead of Concord.

SWEET AND SOUR CHERRIES

MONTMORENCY—THE BIG COMMERCIAL SOUR CHERRY ALWAYS SALABLE

Large, late, heavy cropper of dark red cherries. Thick meated and juicy, yet the best shipper known. Its size and flavor as well as general appearance make it the leader everywhere as a main crop cherry. Ripens late June. (Sour.)

BLACK TARTARIAN (sweet) —

Very large, purplish black, heart-shaped; flesh mild and sweet, and quality considered, one of the best for market and dessert. Tree is vigorous, upright grower and immense bearer. Ripens in July.

WINDSOR (sweet)—Fruit large, dull red; flesh remarkably firm, of fine quality, and a good bearer. Tree hardy and prolific. Ripens middle of July. Highly recommended by some of the most prominent fruit growers of the country. A valuable addition to any garden or orchard.

NAPOLEON (Royal Ann) (sweet) —

Of fine appearance and very large size. Color yellow and amber, with bright red blush; flesh firm, juicy and delicious. Profitable for market, finding a ready sale both for canning and dessert. Bears enormous crops, ripening in July.

SCHMIDT (sweet)—One of the best known and most popular dark sweet Cherries. Fruit large, dark colored, nearly black. Considered one of the most profitable. Tree hardy and vigorous. Seems to succeed in any climate. Ripens late June. Should be included in every commercial or home planting.

Plums for Profit

You Can Raise Plums Anywhere, Even in a City Backyard. They Bear Very Heavy, Order Some.

BURBANK

Most profitable market variety. Tree hardy, spreading, vigorous and very heavy yielder. Bears young. Fruit large and of excellent quality; cherry-red, with lilac blooms. Ripens in August.

REINE CLAUDE

(GREEN GAGE)

An unusually high quality eating Plum, and because of its rich flavor, one of the very best for canning. Large, yellow-green, juicy, melting, sugary and delicious. Ripens quite late, and hangs for a long time on the trees. Very hardy and productive.

GERMAN PRUNE

Large, dark purple, sweet. One of the best for commercial planting. Excellent for drying and canning. Plant a few trees or a large orchard of this variety, and you will not go wrong. Ripens in September.

LOMBARD

Medium size, violet-red, juicy, good, hardy and exceedingly productive; probably the leading market variety of all European kinds; extensively used for pies. Ripens in August.

Apples Are Always a Safe Profitable Crop

SHADE TREES

At Sensational Low Prices

CATALPA BUNGEI (umbrella tree)—Leaves large dark green, lying like shingles on a roof. Forms a dense umbrella shaped head. Valuable lawn tree. 5 to 6 feet, \$1.00; 6 to 7 feet, \$1.50.

CRAB, DOUBLE FLOWING—About the middle of May the trees are covered with beautiful, double, pink, sweet-scented flowers that, at a distance, look like small roses. Tree is a moderate grower, hardy and of upright habit, 2 to 3 ft. 60c.

MAPLE (Red Leaved) (Schroedlers Maple)—One of the most beautiful trees we know, foliage in spring is brilliant purple, later changing to rich dark green. Leaves on the new growth during summer are bright purple, making the tree always beautiful. Similar in habit of growth to the Norway. 6 to 8 ft., \$2.50.

MAPLE (Silver Leaved)—Where the quickest effect is wanted this is the best one. It is handsome with leaves silvery beneath and light green above. It grows extremely fast and reaches 60 ft. 6 to 8 ft., 50c; 8 to 10 ft., 75c.

BIRCH—The well known favorite White Birch of great beauty. Tall and slender, graceful drooping branches, silvery white bark, delicately cut foliage. 5 to 6 ft., \$1.50.

POPLAR (Lombardy)—A tall, narrow, tapering tree of obelisk form, growing rapidly to a height of 60 feet or more at maturity. Always makes a striking feature in any landscape. Fine for planting in groups, along driveways and boundary lines; also for tall screen hedges. 5 to 6 ft., 40c; 3 for \$1.00.

ELM, AMERICAN—Large, lofty; limbs growing in wide sweeping arches, fine for city use, subdivision planting, boulevards, or lanes. These are exceptionally fine trees, straight and well rooted. 6 to 8 ft., 75c; 8 to 10 ft., \$1.00; 10 to 12 ft., \$1.50.

NEVER BEFORE SUCH LOW
PRICES ON SHADE TREES.

BEAUTIFUL EVERGREENS

ARBOR VITAE (American)—Soft green foliage in Spring and Summer, which changes to brown or bronze in winter. Grows faster than other evergreens, and is fine for massing or hedges. 12 to 18 inch (T) each 60c; 18 to 24 inch (T) 90c; 2 to 3 ft. (T) \$1.50.

ARBOR VITAE (Pyramidalis)—A densely columnar type most compact and erect of the entire species. Fully edged with deep green retaining color. The most popular pyramid for flanking the stoops in colonial architecture. 6 to 8 inch (TT) 25c each, 5 for \$1.00.

WHITE SPRUCE—One of the best conifers, especially for cold climates. Compact, upright, long-lived, retaining its branches to the ground; aromatic, drought resisting; varies in color from light green to glaucous blue. 12 to 18 inch (T) \$1.25 each; 5 to 6 inch, 6 for 50c.

COLORADO BLUE SPRUCE—A selected blue shade, from foregoing. This is one of the showiest and most impressive evergreens. 8 to 10 inch (TT) 60c.

PFITZERIANA (Juniper)—One of the most striking of all evergreens. The branches progress spirally along the trunk at a 45-degree angle, thereby making a good "filler"; or standing alone it acquires the symmetry of a broken column. The branches are long and whip-like, densely furnished very dark green; the first new growth thickly studding the expanse like silver beads. 12 to 15 inch (TT) 40c each.

SAVIN—Handsome moss-green foliage; adapted to use as a filler in Evergreen groups, or as a dwarf ground cover. 10 to 12 inch (TT) 65c.

(T means transplanted once and TT means transplanted twice.)

HEDGES FOR TRUE ORNAMENTAL BEAUTY AND PRIVACY

Your home will not be modern and complete without a green growing hedge. Now is the time to tear down the old iron and board fences and get started with an attractive hedge. Our prices are lower than ever before. We have a fine stock of extra heavy, two-year-old plants of all varieties listed below. These kinds are the best known and most popular for hedging purposes.

AMoor RIVER NORTH PRIVET—The hardiest Russian Privet of then all. It has light green leaves, is of upright, graceful growth, is not subject to blight. This Privet is also used many times in foundation groups, for its foliage is very attractive and remains on the plant until late in the season. When properly sheared will give a very formal effect. To get a bushy, compact hedge, the plants should be set several inches deeper than they were in the nursery; and should be given a severe trimming immediately, cutting them back one-third to one-half. Trim your hedge at least once a year, in May or early June. These hedge plants should be set about 12 inches apart.

CALIFORNIA PRIVET — One of the very finest all-purpose hedges, and the most beautiful grown. A pretty shrub with smooth, shiny leaves of unusual beauty. There are many plants that may be used for ornamental hedge with excellent results. But the great demand for the California Privet proves it to be the most popular of all hedge plants. It grows better and with least care of any hedge that can be planted, and thrives in almost any soil. Equally pretty for shrubs and group planting. Shears splendidly in any shape or form. Sometimes subject to winter injury in coldest climates. We have had practically no winter injury with our experience.

RED LEAVED JAPANESE BARBERRY —This shrub fills a long-felt want. Since wheat rust attacked this country and all Purple and Common Barberry had to be cut out, there has been a great demand for a new type that would satisfactorily take the place of the old Purple Barberry. We offer the new Red Japanese and guarantee that if it is placed in a position of plenty of sun it will do as well as the old time Purple.

Red Japanese Barberry may be used for shrubbery border, for clumps, or even as a specimen shrub. The color is a rich, bronzy red similar to the best of the Bloodleaf Japan Maples. It is like the Japanese Barberry in all other respects, attaining its beautiful orange and bronze coloring in fall, and bearing the same profusion of bright red berries throughout the winter.

JAPANESE BARBERRY—Immune from rust. There is no shrub more practical for all purposes or so generally planted where foliage effects are desired. It is dwarf growing, uniformly bushy and rounded in form, numerous leaves covering thorny twigs.

As a filler, edging for other shrubbery, as a foundation screen in front of porches as a hardy low hedge it is unsurpassed. Foliage graduates from brightest to richest greens throughout the Spring and Summer, while Autumn turns them into a blaze of crimson, scarlet and gold. Following the creamy white flowers are oval red berries which gleam along every branch in late fall and far into winter.

ORNAMENTAL SHRUBS

Will Increase the Value of Your Home and Beautify It Greatly

It is not a home until it is planted. Just a little shrubbery adds a touch of beauty. It has been said that we may doubtless live as long without beauty around the home but probably not as happily.

HYDRANGEA P. G.—One of the most popular shrubs in cultivation, if planted in rich soil and severely pruned every spring before the leaf buds open, will get to be very dense, dwarf clumps of compact form, wonderfully attractive when laden with their massive, white plumes. Large beds, kept at a uniform development, are extremely showy; first snowwhite, then pink, then reddish bronze and green. August until autumn.

HYDRANGEA A. G.—The massiveness of bloom on these valuable shrubs and their long blooming season, assures them a place in every grouping where solid white effects are required. The flowers are in a large way similar to the familiar "Snow ball" in appearance; conspicuously white and imposing. July to September. By cutting back to the crown each spring, the bushes may be kept round and dense at a normal height of 3 to 5 feet. They are excellent for solid low borders.

SNOWBERRY, WHITE — A desirable shrub with small, pink flowers, followed by large, white, waxlike berries, which hang on the plant through most of the winter. Is very showy and succeeds everywhere. Does well in shade. Grows 3 to 4 feet tall.

NOTE—We Sell Large Choice Plants . . . You Get Immediate Planting Effects.

SPIREA VAN HOUTTEI—This is undoubtedly the finest of all Spirea, giving a most graceful appearance even when out of bloom. The flowers are pure white, and borne in dense clusters along the whole length of the branches. Excellent as a hedge plant or for grouping with other shrubs.

SPIREA ANTHONY WATERER — A dwarf variety growing 18 to 24 inches high, covered with large heads of crimson flowers. Foliage is very handsome, being variegated with creamy white or yellow.

If flowers are removed as they fade, it will cause the plant to keep up a continuous bloom until freezing weather occurs.

PHILADELPHUS VIRGINALIS—Blooms throughout the season. This is a new and wonderful addition to the Mock Orange family, but is far beyond anything in this line that has been brought out in the past.

It far excels any other Mock Orange in form or beauty. Virginalis has unusually large, semi-double blooms, pure white, sweetly scented, appearing in clusters of 5 to 7; closely resembles a bride's bouquet of orange blossoms; ranks among the best for cutting. Blooms in June and continues over a long period. A very vigorous, tall grower, used with striking effect as a hedge, also makes wonderful individual specimens.

ORNAMENTAL VINES

For Walls, Porches, Pergolas

CLEMATIS PANICULATA—A rapid grower, and desirable wherever a quick growing vine is needed on walls, verandas, etc. In late summer it produces dense sheets of medium sized pure white flowers of the most pleasing fragrance. Will grow in almost any soil, and is entirely free from blight and insects. 3-yr. No. 1, 25c each; 3 for 60c.

HONEYSUCKLE, HALL'S JAPAN—A strong, vigorous vine, with pure white flowers changing to yellow. Foliage remains green well into the winter. Extremely fragrant and covered with flowers almost the entire season. 3-yr., No. 1, 25c each; 3 for 60c.
